## OBJECTIVE

---

Software Engineer proficient in JavaScript, React, Node.js, Express.js, MongoDB, MySQL, and Docker, seeking full-time software engineering roles. Passionate about building scalable, responsive, and user-friendly applications.

## SKILLS

---

|                               |                                                                  |
|-------------------------------|------------------------------------------------------------------|
| <b>Programming Languages:</b> | C, C++, Java, JavaScript, TypeScript, Python                     |
| <b>Frontend:</b>              | HTML5, CSS, TailwindCSS, React.js, Redux                         |
| <b>Backend:</b>               | Node.js, Express.js, Flask, RESTful APIs, Cloudinary, JWT        |
| <b>DevOps:</b>                | Docker                                                           |
| <b>Databases:</b>             | MySQL, MongoDB, SQLite                                           |
| <b>Machine Learning:</b>      | TensorFlow/Keras, CNN, Scikit-learn, Pandas, NumPy, Hugging Face |
| <b>Version Control:</b>       | Git, GitHub                                                      |
| <b>Soft Skills:</b>           | Effective Communication, Fast Learner, Adaptability              |

## PROJECTS

---

**Stock Market Prediction Application** Developed a full-stack stock market prediction system integrating React.js frontend, Node.js/Express backend, and Python ML pipeline. Implemented end-to-end machine learning workflow with efficient data collection, technical indicator feature engineering (SMA, EMA, RSI, ROC), and LSTM models for stock price forecasting. Built responsive UI with Tailwind CSS, real-time data visualization using Recharts, and MongoDB backend for persistent storage. Containerized application using Docker for seamless deployment.

*Tech Stack: React.js, Node.js, Express, MongoDB, Tailwind CSS, Recharts, Python, TensorFlow/Keras, LSTM, Scikit-learn, Pandas, NumPy, Docker, Vite*

**Brain Tumor Detection using CNN** Developed a deep learning model using Convolutional Neural Networks (CNN) to classify and detect brain tumors from MRI scans. Integrated and deployed the trained model on Hugging Face for reliable hosting and API access. Built a Flask-based web application that allows users to upload medical images and receive real-time predictions. Applied data preprocessing, augmentation, and evaluation techniques to improve accuracy and generalization. *Tech Stack: Python, TensorFlow/Keras, Flask, Hugging Face, NumPy, OpenCV*

**Sweet Shop Management System** Designed and implemented a sweet shop management system to handle inventory, product details, and sales operations efficiently. Built features for adding, updating, and managing sweets, along with a simple interface to interact with the system. Structured the project for modularity and ease of extension for future features such as persistent storage and authentication. *Tech Stack: React.js, Typescript, Node.js, Express.js, SQLite*

**NextHire – Online Job Portal** Developed a scalable job portal connecting job seekers and recruiters, featuring job posting, applications, and automated email notifications. Integrated Redux for state management, Nodemailer for emails, and Cloudinary for file uploads. Implemented role-based dashboards, job tracking, responsive UI, and advanced search/filter options. *Tech Stack: React.js, Express.js, MongoDB, CSS, Nodemailer, Cloudinary, Redux*

## CERTIFICATIONS

---

**Oracle Cloud Infrastructure: Generative AI Professional** Demonstrated expertise in designing, deploying, and managing generative AI solutions using Oracle Cloud Infrastructure (OCI)

## EDUCATION

---

**Bachelor of Engineering in Computer Science (IoT Specialization)**, Chandigarh University 2022 – 2026
